

# Environmental Policy

*We believe that the environment represents a strategic resource for both current and future generations*

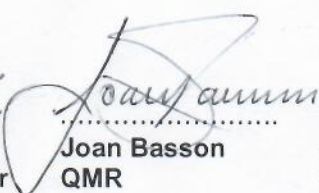

*We need to minimize the impact, which its activities have on the environment by applying appropriate, cost effective measures to foster environmental, sustainable economic development. The following principals are embodied in the Company's Environmental Management Program and practices:*

- Environmental concerns are part of the day to day activities of the Company's operations*
- All activities, from planning to implementation of projects, incorporate efficient use of resources and minimization of both environmental impacts and waste generation*

*The Company needs to strive to continuous improvement of environmental performance in the light of economic, technical and scientific change*
